

Custom Material Handling & Returnable Packaging

EXT, Inc. brings over 30 years of design and manufacturing expertise to your material handling requirements. This integration is critical to the timely, efficient implementation of successful returnable packaging programs. After a full review of your requirements, designs are created that provide your company with custom containers that protect and transport your products in the most efficient and cost effective manner possible.

We offer a variety of custom material handling products. We manufacture custom trays, heavy-duty clamshells, totes, pallets, assembly/conveyor platforms, dividers, and rack dunnage. Our custom reusable trays and containers are often used in conjunction with larger bulk containers or standard pallets, which EXT also produces. For electronic applications we offer electrostatic dissipative and conductive products.

EXT's reusable products provide substantial cost savings. In a closed-loop shipping system, where part protection is critical, savings are achieved due to a combination of factors including the long term durability of our containers and reduction in part damage. Other significant benefits include minimizing storage space, safety for your workforce, and the ability to recycle your containers at the end of their lifecycle.

EXT's satisfied customers include leading industrial suppliers of automotive components, motors, compressors, pumps, and electronic equipment. While many of our customers are well versed in reusable packaging, we also work frequently with divisions and companies that are supplying returnable packaging for the first time.

We welcome the opportunity to discuss your requirements and how we provide solutions.

Benefits of Custom Material Handling & Returnable Packaging

Product protection through innovative designs:

Eliminate costly damage to your products caused by broken or crushed containers and wooden pallets. Some products, due to shape, weight or cost simply require better protection. Let us examine the possibilities for multi-part trays.

Durable:

EXT's durable reusable containers are good trip after trip. When properly handled, our products last for years.

Safe:

Broken and crushed boxes not only damage your parts, they have the potential, particularly with heavier loads, to seriously injure your workers. Our products also eliminate nail, splinter and corrugated paper cut injuries.

Space-saving:

When empty and nested, our material handling products create significant space-savings. Freeing up space is valuable, whether in transit or in plant.

Lightweight:

Our plastic material handling products typically weigh less, often far less, than their wooden pallet, crate, or structural foam alternatives.

Cleanable:

EXT's products withstand hot water, steam washing, and virtually all chemical detergents.

Identifiable:

Information such as container ownership, return to location, and part number is often molded into our material handling products. Other common options include color striping, placards, labels, and RFID tags.

Recyclable:

When the product life of our material handling products is complete, they are fully recyclable. We eliminate the hassle and cost of disposal, and offer you a credit for your old containers. Ecologically friendly, and economically smart.
